

PLANETAUTHORIZE INSTALLATION INSTRUCTIONS FOR UBERCART 2.X

You can use Ubercart version 2 or higher with the Planetauthorize Payment Gateway by using our gateway emulator for AuthorizeNet. Contact SaleManager directly to get a copy of our free payment module for Ubercart 2. Our free Ubercart payment module is configured to use our gateway emulator - the POST URL has already been changed to route to our Planetauthorize.

Be sure to back up the file named 'uc_authorizenet.module' within your shopping cart files. Then you should upload the attached file, selecting to overwrite the authorize.net module. Within the shopping cart admin, the merchant would choose Authorize.net as the payment processor.

Your Planetauthorize gateway username should be entered as the API ID and your Planetauthorize gateway password as the Transaction Key.

Contact support@salemanager.com directly with questions.
